Boyner has seen 3x higher offline return on ad spend (ROAS) compared to online-only campaigns

Mustafa Cengiz

Director of Growth & Digital Marketing

"VenueX helped us uncover the true impact of our digital campaigns on store sales—unlocking higher returns and smarter spend allocation."

126 Stores	208.000+ Products	3X RoaS

The Challenge

Boyner, Turkey's leading omnichannel department store, wanted to drive sales across 100+ physical stores and online channels—while accurately measuring the incremental impact of digital ads on in-store performance and maximizing return on ad spend (ROAS).

The Approach

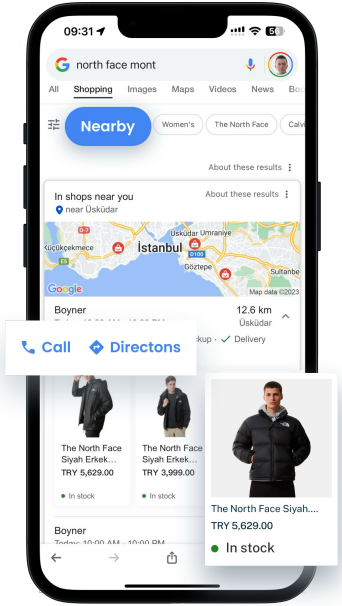
To unlock omnichannel strategy and data-driven decisions, Boyner partnered with VenueX to;

- List and optimize store profiles across search and map platforms
- Sync store-level inventory with digital ad platforms
- Integrate in-store sales data in a privacy-safe way to attribute physical sales to online campaigns

This setup enabled smarter campaign activation, unified measurement, and better ROI across all channels.

The Results

Boyner gained a robust omnichannel foundation with integrated data and improved local visibility. With VenueX, the brand achieved 3x higher offline ROAS compared to online-only campaigns—proving the value of connecting digital efforts to in-store outcomes.



VenueX integrated Boyner's CRM, POS, and inventory systems with major digital platforms including Google, Meta, TikTok, Apple Maps, and Yandex. The deployment activated modules for location listings, local inventory syncing, and offline sales attribution—enabling end-to-end visibility and optimization of omnichannel performance.
